CHECKLIST

FOR EROSION AND SEDIMENT CONTROL PLANS

___ Minimum Standards - All applicable Minimum Standards must be addressed.

NARRATIVE

___ Project description - Briefly describes the nature and purpose of the land-disturbing activity, and the area (acres) to be disturbed.

___ Existing site conditions - A description of the existing topography, vegetation and drainage.

___ Adjacent areas - A description of neighboring areas such as streams, lakes, residential areas, roads, etc., which might be affected by the land disturbance.

___ Off-site areas - Describe any off-site land-disturbing activities that will occur (including borrow sites, waste or surplus areas, etc.). Will any other areas be disturbed?

___ Soils - A brief description of the soils on the site giving such information as soil name, mapping unit, erodibility, permeability, depth, texture and soil structure.

___ Critical areas - A description of areas on the site which have potentially serious erosion problems (e.g., steep slopes, channels, wet weather/underground springs, etc.).

___ Erosion and sediment control measures - A description of the methods which will be used to control erosion and sedimentation on the site. (Controls should satisfy minimum standards in Chapter 3.)

___ Permanent stabilization - A brief description, including specifications, of how the site will be stabilized after construction is completed.

___ Stormwater runoff considerations - Will the development site cause an increase in peak runoff rates? Will the increase in runoff cause flooding or channel degradation downstream? Describe the strategy to control stormwater runoff.

___ Calculations - Detailed calculations for the design of temporary sediment basins, permanent stormwater detention basins, diversions, channels, etc. Include calculations for pre- and post-development runoff.
SITE PLAN

- Vicinity map - A small map locating the site in relation to the surrounding area. Include any landmarks which might assist in locating the site.

- Indicate north - The direction of north in relation to the site.

- Limits of clearing and grading - Areas which to be cleared and graded.

- Existing contours - The existing contours of the site.

- Final contours - Changes to the existing contours, including final drainage patterns.

- Existing vegetation - The existing tree lines, grassed areas, or unique vegetation.

- Soils - The boundaries of different soil types.

- Existing drainage patterns - The dividing lines and the direction of flow for the different drainage areas. Include the size (acreage) of each drainage area.

- Critical erosion areas - Areas with potentially serious erosion problems. (See Chapter 6 for criteria.)

- Site Development - Show all improvements such as buildings, parking lots, access roads, utility construction, etc.

- Location of practices - The locations of erosion and sediment control and stormwater management practices used on the site. Use the standard symbols and abbreviations in Chapter 3 of the E&S Handbook.

- Off-site areas - Identify any off-site land-disturbing activities (e.g., borrow sites, waste areas, etc.). Show location of erosion controls. (Is there sufficient information to assure adequate protection and stabilization?)

- Detail drawings - Any structural practices used that are not referenced to the E&S Handbook or local handbooks should be explained and illustrated with detail drawings.

- Maintenance - A schedule of regular inspections and repair of erosion and sediment control structures should be set forth.
